

ECE 111 - Homework #8

EE 206 Circuits I
Due Monday, October 16th

$$V = IR, P = VI$$

- 1) A resistor has the following volts / amps / resistance / power. Determine the missing parameters:

Volts	Amps	Ohms	Watts
24V	1.6A	15 Ohms	38.4 W
24V	3.0A	8	72.0 W
68.12V	2.2A	30.99 Ohms	150W
24V	4.00A	6.00 Ohms	96W

Sample Calculation

$$P = V \cdot I$$

$$P = 24V \cdot 1.6A$$

$$P = 38.4W$$

$$V = I \cdot R$$

$$24V = 1.6A \cdot R$$

$$R = 15\Omega$$

Resistor Color Codes

2) Determine the value of the following resistors

0	1	2	3	4	5	6	7	8	9
black	brown	red	orange	yellow	green	blue	violet	grey	white

a) Brown - Black - Red

$$1 - 0 - 2$$

$$R = 10 \cdot 10^2 \Omega$$

$$R = 1k\Omega$$

b) Yellow - Violet - Orange

$$4 - 7 - 3$$

$$R = 47 \cdot 10^3 \Omega$$

$$R = 47k\Omega$$

c) White - Brown - Yellow

$$9 - 1 - 4$$

$$R = 91 \cdot 10^4 \Omega$$

$$R = 91k\Omega$$

Kirchoff's Laws:

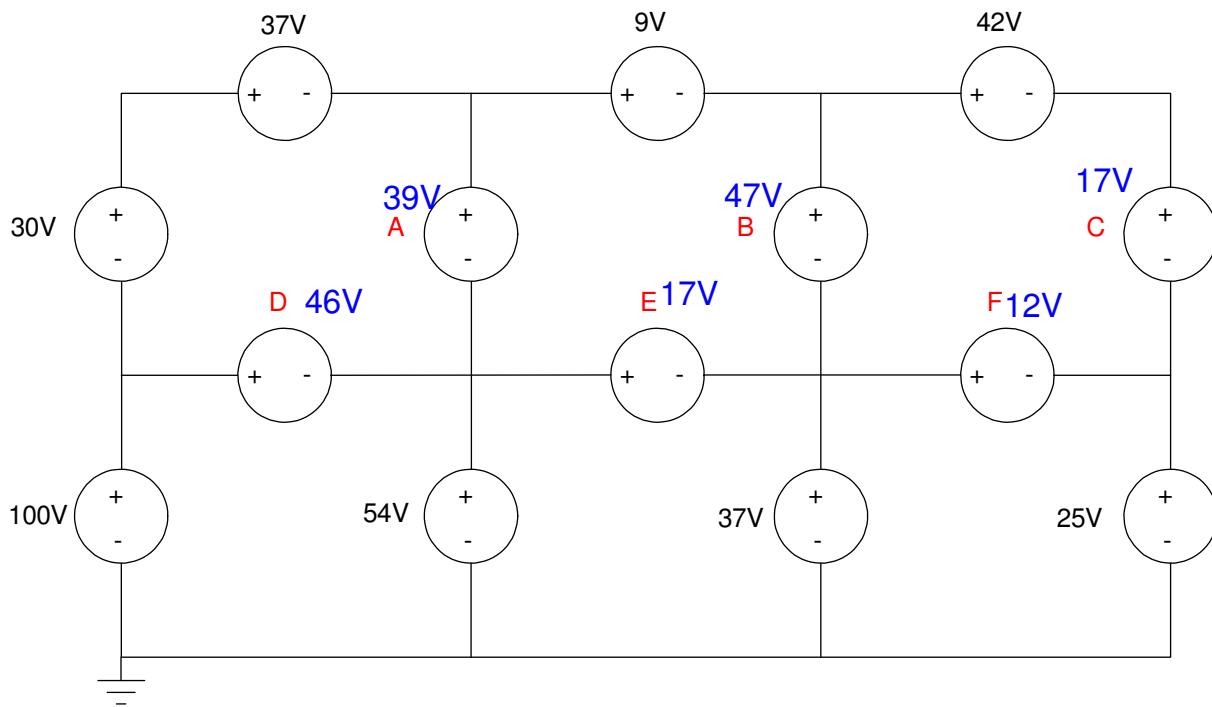

3) Use conservation of voltage to determine the unknown voltages

around any closed path, the voltages must sum to zero

- add if you hit the + sign first
- subtract if you hit the - sign first

Example: Upper left corner

$$-30V + 37V + A - D = 0$$

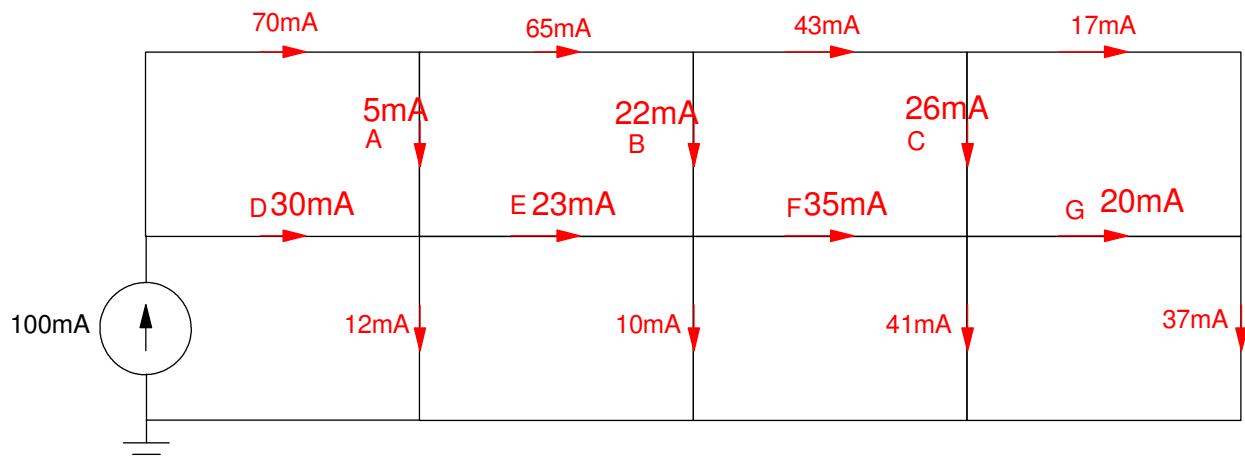

4) Use conservation of current to determine the unknown currents

At any node,

- Current In = Current Out
- The sum of the current from the node must be zero

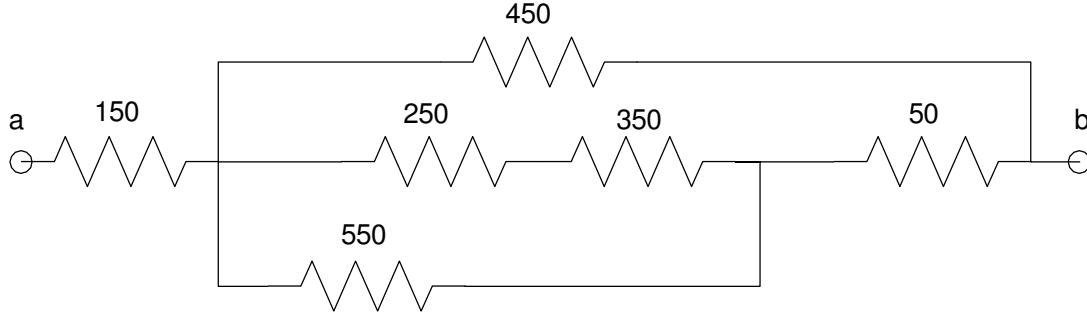

Example:

$$A + D = E + 12mA$$

Resistors in Series and Parallel

5) Find the total resistance R_{ab} by hand

$$250 + 350 = 600$$

$$600 \parallel 550 = 286.95$$

$$286.95 + 50 = 336.95$$

$$336.95 \parallel 450 = 192.68$$

$$192.68 + 150 = 342.68$$

ans: 342.68 Ohms

On an HP Prime

```
350  
enter  
250  
+  
 $x^{-1}$   
550  
 $x^{-1}$   
+  
 $x^{-1}$   
50  
+  
 $x^{-1}$   
450  
 $x^{-1}$   
+  
 $x^{-1}$   
150  
+
```

6) Find the total resistance R_{ab} using CircuitLab

- Apply a 10V source to a and b.
- Determine the current draw from the 10V source

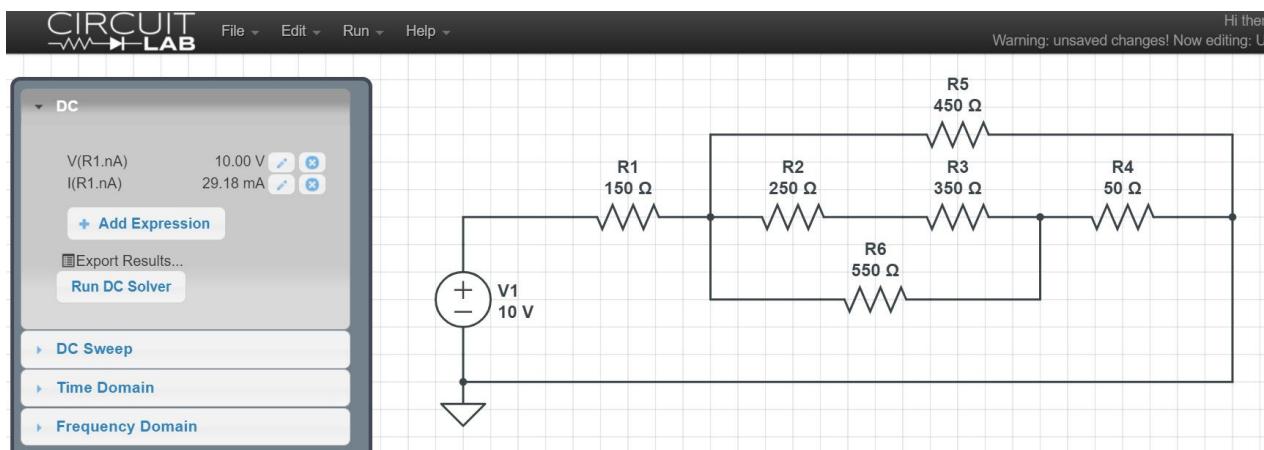

Calculate the net resistance from $V = IR$

$$V = IR$$

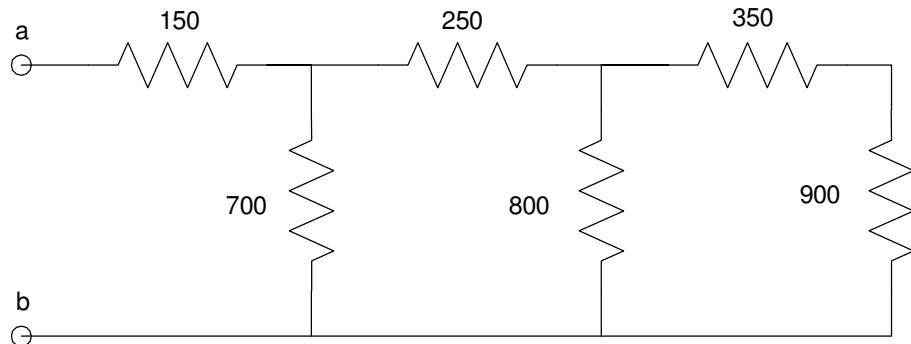

$$10V = 29.18mA \cdot R$$

$$R = 342.70\Omega$$

Calculated value = 342.68 Ohms

7) Find the total resistance R_{ab} by hand

$$350 + 900 = 1250$$

$$1250 \parallel 800 = 487.80$$

$$487.80 + 250 = 737.80$$

$$737.80 \parallel 700 = 359.20$$

$$359.20 + 150 = 509.20$$

ans: $R_{ab} = 509.20$ Ohms

With an HP Prime calculator

900

enter

350

+

x^{-1}

800

x^{-1}

+

x^{-1}

250

+

x^{-1}

700

x^{-1}

+

x^{-1}

150

+

8) Find the total resistance, R_{ab} , using CircuitLab

- Apply a 10V source to a and b.
- Determine the current draw from the 10V source
- Calculate the net resistance from $V = IR$

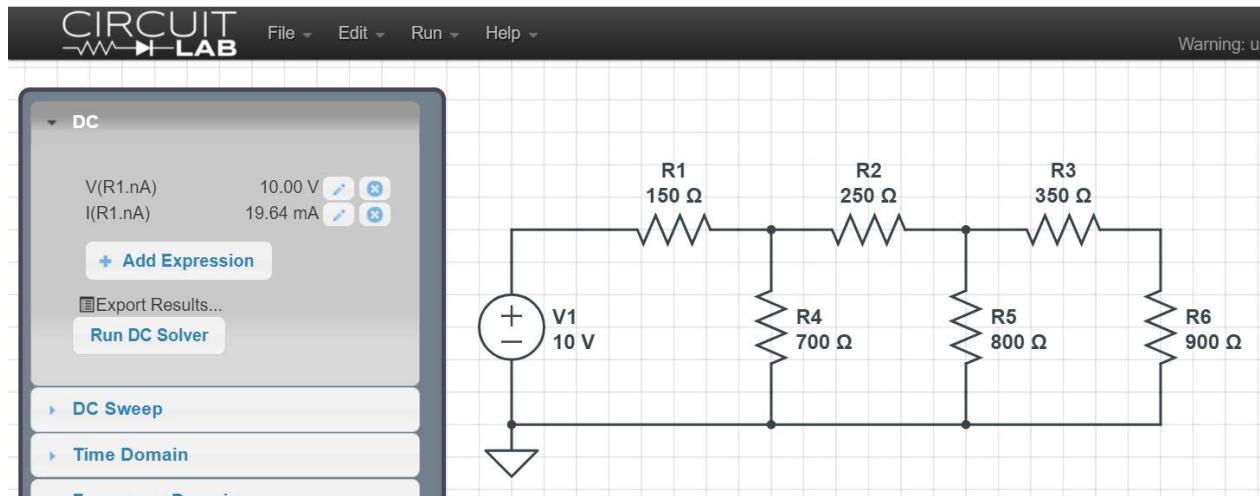

Calculations

$$V = IR$$

$$10V = 19.64mA \cdot R$$

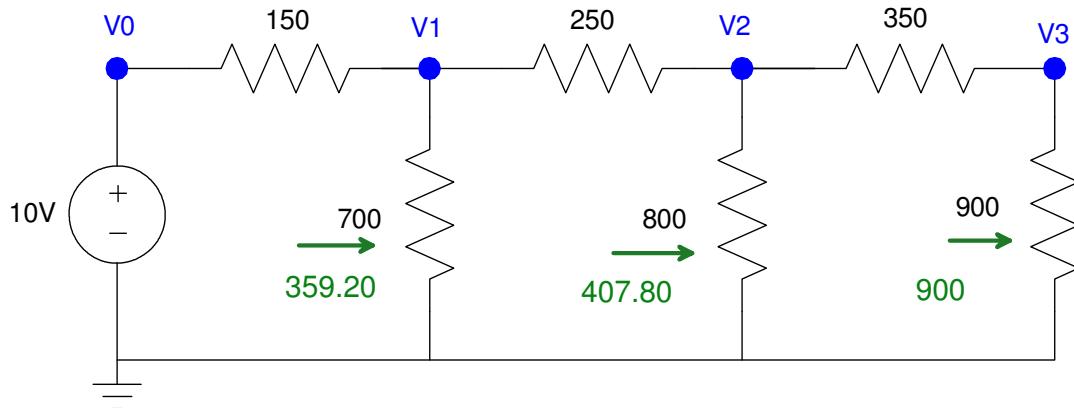

$$R = 509.16\Omega$$

Calculated = 509.20 Ohms

Voltage Division

9) Use voltage division to find V₁, V₂, and V₃.

Start by finding the impedance looking right at V₁, V₂, and V₃

$$R_3 = 900 \text{ Ohms}$$

R₂:

$$350 + 900 = 1250$$

$$1250 \parallel 800 = 407.80$$

R₁:

$$407.80 + 250 = 657.80$$

$$657.80 \parallel 700 = 359.20$$

Now use voltage division

$$V_1 = \left(\frac{359.20}{359.20+150} \right) V_0$$

$$V_1 = 7.054V$$

$$V_2 = \left(\frac{407.80}{407.80+250} \right) V_1$$

$$V_2 = 4.664V$$

$$V_3 = \left(\frac{900}{900+350} \right) V_2$$

$$V_3 = 3.358V$$

10) Use CircuitLab to find V₁, V₂, V₃.

Same results as problem #9
